Grant applications are required to be submitted electronically in one PDF document.
Due date of March 1, 2016
Please visit ARN’s website for new application guidelines @ www.rehabnurse.org - RNF section.
Call for Research Proposals: Care Transitions

The Rehabilitation Nursing Foundation (RNF) of the Association of Rehabilitation Nurses (ARN) is soliciting proposals for one-time funding for research studies that focus on the coordination or transition of care and services from one provider to another, one health care facility to another, or from a health care facility to home in a rehabilitation patient population.

The purpose of this call is to address current problems of inadequate care coordination and transitions of care, which are in large part, due to shorter lengths of stay in acute care facilities and higher use of post-acute care (PAC) facilities (e.g., inpatient rehabilitation facilities, skilled nursing facilities, long-term care hospitals, and home health agencies).

Major problems identified with inadequate care transition and coordination include, but are not limited to:

- health care errors;
- unmet patient and caregiver needs;
- poor satisfaction with care;
- high rates of preventable readmissions;
- increased health care costs;
- lack of effective transition communication between providers, patients, and caregivers; and
- ineffective patient care education for the patient and caregiver at transition.

The ARN white paper, *The Essential Role of the Rehabilitation Nurse in Facilitating Care Transitions* (Camicia et al, 2014), serves as a catalyst in the development of researchable questions that address care transition and coordination of services in the rehabilitation patient population.

This call for proposals is dedicated to investigations that have the potential of generating data that will lead to further extramural funding and that contribute to the larger body of rehabilitation and health care knowledge. This call does not include quality improvement, program evaluation, and other performance improvement projects.

- Maximum funding available is $30,000
- Number of awards to be funded will depend on the quality of proposals submitted and the amount of funding requested
- Time period for the grant is January 1, 2017 – December 31, 2019
- Preference will be given to applicants who are members of ARN
- Proposals will be reviewed by members of the Research Fund Committee and a peer review panel
- Funded applicants will be expected to disseminate findings by submitting a manuscript for publication in the ARN journal, *Rehabilitation Nursing*, and an abstract for presentation at the annual ARN Educational Conference
- Proposal must adhere to the attached “Guidelines for Proposals”

Questions
Nurse researchers who have specific questions or concerns not addressed in this packet should contact the RNF office.

Introduction

Rehabilitation Nursing Foundation (RNF)
The Rehabilitation Nursing Foundation (RNF) was formed by the Association of Rehabilitation Nurses (ARN) for the purpose of advancing rehabilitation nursing through education and research. The grant program was established in 1988 to encourage nurses to conduct research.

Mission Statement
The Rehabilitation Nursing Foundation is dedicated to advancing rehabilitation nursing practice by promoting, supporting, conducting and disseminating research to improve the quality of healthcare to individuals with disability or chronic illness.

Rehabilitation Nursing
Rehabilitation nursing is a specialty practice area within the scope of professional nursing practice. Rehabilitation is the diagnosis and treatment of human responses of individuals and groups to actual or potential health problems stemming from altered functional ability and altered life-style.

The goal of rehabilitation nursing is to assist the individual with disability and chronic illness in the restoration and maintenance of maximal health. The rehabilitation nurse should be skilled at treating alterations in functional ability and life-style resulting from physical disability and chronic illness.

Rehabilitation nurses provide comfort and therapy, promote health-conducive adjustments, support adaptive capabilities, and promote achievable independence. This practice takes place in many settings and roles.

Guidelines for Proposals

Focus Areas
This special call for research proposals addresses the coordination or transition of care and services from one provider to another, one health care facility to another, or from a health care facility to home in a rehabilitation patient population. The ARN white paper, *Essential Role of the Rehabilitation Nurse in Facilitating Care Transitions* (Camicia et al, 2014), should serve as a catalyst in the development of researchable questions that address care transition and coordination of services in the rehabilitation patient population.

Eligible Applicants
The principal investigator (PI) for the research grant must have a research doctorate or be enrolled in a research doctoral program, be a registered nurse who is active in rehabilitation or who demonstrates interest in and significant contributions to rehabilitation nursing. Preferences will be given to members of the Association of Rehabilitation Nurses (ARN).

Responsibilities of Principal Investigator
1. Completion of the project within 2 years of initial funding;
2. Submission of a progress report to the RNF Research Fund Committee every 6 months until the research is completed;
3. Submission of a publishable manuscript presenting the findings to the ARN journal, Rehabilitation Nursing, within 2 years of completed research;
4. Presentation of a paper or poster pertaining to the research at an Association of Rehabilitation Nurses educational conference within 1 year of completed research;
5. Acknowledgment in any publication, paper, or poster that the research was supported by the Rehabilitation Nursing Foundation of the Association of Rehabilitation Nurses.

Required Information
Prepare the proposal according to the *Publication Manual of the American Psychological Association* (6th Ed.). The proposal narrative is limited to 10 typed, double-spaced pages using 12-point, Times New Roman font, and 8 ½” x 11” paper with 1 inch margins. Sections not included in the 10-page proposal are references, project budget, appendices, and RNF required forms.

The following RNF forms/materials are required and must be completed upon submission:

1. Research Checklist – the form verifies inclusion of all required materials
2. Summary Data Form – the form includes title of the study and contact information of PI and co-investigators.
3. Administrative Approval Form – the form indicates that the principal investigator (PI) has his or her employer’s approval to conduct the proposed study.

4. Abstract Form – using the form, the abstract must be typed, double-spaced, limited to 350 words, and should address the purpose and significance of the research, the research methodology, and the plan for analysis.

5. IRB Approval Letter - the IRB or Protection of Human Subjects Committee approval letter may be pending at the time of submission, but written approval must be received by ARN before any funds will be awarded.

Proposal Headings
The proposal must include and address the following National Institutes of Health (NIH) headings:

1. Significance
   This section includes the description of the problem, its significance to rehabilitation nursing, a concise and critical review of current literature including an explicit description of how the proposal will build on the ARN white paper, *Essential Role of the Rehabilitation Nurse in Facilitating Care Transitions* (Camicia et al., 2014).

2. Investigators
   Clearly specify the investigator who will be responsible for the conduct of the study (i.e., the PI) and his/her contributions. Describe the functions of all personnel involved with the project (e.g., co-investigators, consultants, or other key personnel). Include a NIH Biosketch (Appendix D) of the PI, all co-investigators, and consultants. Please see [NIH Biosketch form and instructions](http://grants.nih.gov/grants/funding/phs398/phs398.html)

3. Innovation
   This section provides a description of the study’s potential for challenging or shifting the current research or clinical practice paradigms through the use of such venues as novel theoretical concepts, approaches or methodologies, instrumentation, analysis, or interventions.

4. Approach
   This section describes the overall strategy, methodology, and analyses appropriate to accomplishing the study aims or purpose. At a minimum, include a discussion of the design, sample, protection of human subjects, data collection, procedures, instrumentation, analysis, and potential limitations.

5. Environment
   This section describes the scientific environment in which the study will be conducted and ways in which the surroundings contribute to success of the study. Include institutional support, equipment and other physical resources available to the investigator. Additionally, obtain written approval of the appropriate administrator of the institution or agency in which the PI is employed. ([Administrative Approval Form](http://grants.nih.gov/grants/funding/phs398/phs398.html))

6. Timeline
   A precise timeline illustrating project tasks and objectives to be completed in less than 2 years is required.

Additional Sections (separate from proposal)

References
References address the bibliographic information of sources cited in the proposal.

Project Budget
A budget for the entire project must be submitted. If RNF funds are to be used for only a portion of the budget, identify the specific items for which you seek support. Identify remaining items to be funded from other sources and in-kind contributions. Clearly describe those sources of funding or support in addition to the amount you are seeking from each entity. Salaries are acceptable costs.

This section must specify the direct costs associated with the research. Travel expenses to the ARN Annual Educational conference for presentations should be included in the budget. Indirect costs and travel expenses for other meeting presentations will not be funded by RNF. The purchase of a computer will not be funded unless significant justification is provided in the proposal. Include notation of contributed funds, personnel, or indirect allowances. The budget must represent sufficient funds to complete the project.
Because funds are not distributed in one sum, the principal investigator should propose a strategy for the receipt and distribution of funds during the length of the project. The strategy should facilitate the conduct of the study and may be done on a semiannual basis, by expense voucher, by task or objective, or by another means. The funding year shall begin January 1, 2017.

**Appendices**

Include all of the following in the Appendices:

Appendix A: Measurement Instruments
Appendix B: Institutional Review Board Approval
Appendix C: Participant Consent Forms
Appendix D: NIH Biosketches and Other Supporting Documents

**Submission Requirements**

1. Submit the entire packet electronically as a single pdf file.
2. Complete all proposal materials. Incomplete proposals will not be considered.
3. Email proposals to: Rehabilitation Nursing Foundation info@rehabnurse.org
4. **Deadline - Proposals must be emailed by March 1, 2016 (Noon Central Time).**

Proposals received after this time will not be considered. An email confirmation will be sent within 48 hours of receiving your proposal. There are no exceptions to the deadline based on failure to receive application materials.

**Evaluation Procedures**

Proposals will be reviewed by members of the Research Fund Committee and a peer review panel. Proposals will be rated according to the NIH criteria for proposal review. For more information see: [http://grants.nih.gov/grants/peer_review_process.htm](http://grants.nih.gov/grants/peer_review_process.htm).

The Research Fund Committee members will make funding recommendations to the RNF Board of Trustees. The RNF Board of Trustees has the final authority on funding decisions.

All applicants will be notified of the disposition of their proposals after action by the RNF Board of Trustees. Principal investigators will receive a summary critique of their proposal from the review committee.

**Notification of Award**

Grant recipient(s) will be notified in July 2016.

Funds will be awarded to the institution, agency, or investigator at the discretion of the RNF Board of Trustees and will be based on the recommendations of the Research Fund Committee. The strategy for funding proposed by the principal investigator will be considered in the decision. Proof of review and approval the Human Subjects Review Board or Institutional Review Board (IRB) from the PI's institution must be received by ARN before any funds are awarded.
Proposals Funded by RNF

1988
Developmental Competence in Adolescents with an Acquired Disability

1989
Health-promoting Knowledge, Attitudes, and Behaviors of Adults with Disabilities
